

[Starting Out With Java: Early Objects \(6th Edition\) Download](#)

Program Output with Example Input Shown in Bold

```
Enter a number: 10 [Enter]
Enter another number: 0 [Enter]
Division by zero is not possible.
Please run the program again and
enter a number other than zero.
```

Program Output with Example Input Shown in Bold

```
Enter a number: 10 [Enter]
Enter another number: 5 [Enter]
The quotient of 10 divided by 5 is 2.0
```

The value of `number2` is tested before the division is performed. If the user enters 0, the block of statements controlled by the `if` clause executes, displaying a message that indicates the program cannot perform division by zero. Otherwise, the `else` clause takes control, which divides `number1` by `number2` and displays the result. Figure 3-9 shows the logic of the `if-else` statement.

Figure 3-9 Logic of the `if-else` statement
